## Information about different cuts

**INOX:** Outstanding milling performance in stainless steel as well as ferritic, austenitics and martenic materials.

**Aluminium:** Suitable for aluminium and aluminium alloys as well as plastics.

**Cut 1:** Suitable for deburring non-hardened steels, soft steels, alloys and hard plastics.

**Cut 2:** Suitable for steels with high tensile strenghts, inox, cast steels, welding seams and brass.

**DIN MY:** For general purposes such as deburring, chamfering and smoothing edges with clean surface. Suitable for steels with high tensile strenght and welding seams.

**Diamond:** Suitable for hardened steels with excellent surface quality and welding seams with high tensile strenght.

**DIN MX and DIN MX TiN:** With this universal cutting profile even hardest materials andwelding seams can be machined with best finishing quality. Ideal for the tool and mould industry.

**Special steel:** Special designed geometry for steel and cast iron applications. Excellent cutting performance and high chip removal.
