Information about different cuts

Cut 2: Suitable for steels with high tensile strength, inox, cast steels, welding seams and brass.

Diamond: Suitable for hardened steels with excellent surface quality and welding seams with high tensile strength.

DIN MY: For general purposes such as deburring, chamfering and smoothing edges with clean surface. Suitable for steels with high tensile strength and welding seams.

DIN MX and DIN MX TiN: With this universal cutting profile even hardest materials and welding seams can be machined with best finishing quality. Ideal for the tool and mould
